# HP2560\_C display Manual

Model: HP2560\_C

Thank you for purchasing this Professional WIFI Weather Station Display! This device provides accurate weather readings and is Wi-Fi capable to stream data from the weather station to Internet based weather services.

This manual will guide you, step-by-step, through setting up your weather station and console, and understanding the operation of your weather station. Use this manual to become familiar with your professional weather station and save it for future reference.

# 1 Warnings and Cautions

#### Warning:

- Any metal object may attract a lightning strike, including your weather station mounting pole. Never install the weather station in a storm.
- If you are mounting the weather station to a house or structure, consult a licensed electrician for proper grounding. A direct lightning strike to a metal pole can damage or destroy your home.
- Installing your weather station in a high location may result in injury or death. Perform as much of the initial check out and operation on the ground and inside a building or home. Only install the weather station on a clear, dry, day.

**Note:** The console operates using an AC adapter. The included adapter is a switching-type adapter and can generate a small amount of electrical interference with the RF reception in the console, when placed too close to the console. Please keep the console display at least 2 ft. or 0.5 m away from the power adapter to ensure best RF reception from the outdoor sensor package.

**Note:** The console can store historical data on a memory card. This memory card is **not included**. If you want to use one you will need a microSD memory card. The supported max capacity of the card is 32G (Format: FAT32). A 1GB card will store more than 10 years' worth of data, so you do not need a very large capacity card. There is also no requirement on the speed class of this card as data writing happens infrequently and is not speed critical.

# 2 Overview

#### 2.1 Display console

Figure 1: Display console screen

Figure 2: Display console side views

Figure 3: Display console back views

**Note:** The USB port in the console of weather station is only for firmware update, not for data communication (USB cable not included).

Figure 4: Display console top view

The antenna is indoor sensor which will display indoor temperature on screen, humidity and barometric pressure.

You can use a micro SD card (max 32G, Fat 32) for the firmware update.(SD card not included).

Update firmware process:

- 1. Visit www.ecowitt.com for available update
- 2. On the navigation bar, select Manual & Firmware under Support
- 3. Search "HP2561" find the firmware option and download it on your computer
- 4. Take out your micro SD card from the console
- 5. Drag the unzipped file(user.bin) under the root directory of your micro SD card.
- 6. Insert the card into the console, then it will update the firmware automatically.

## 2.2 Features

- Upgrade physical buttons to touch buttons
- Upgrade antenna integrate indoor sensor
- 7" large TFT (high resolution) colored display console
- Two background (dark/light) themes as option.
- Indoor temperature, humidity with integrated design
- Absolute and Relative barometric pressure
- Wind speed, wind direction, rainfall, outdoor temperature and humidity, solar radiation and UV.
- Calculates dew point, wind chill, heat index, moon phase and sunset/sunrise time
- Weather forecast & alarm
- View historical records of sensors and graph directly on the console
- Collects sensor data from various supported wireless sensors.
- Additional/optional sensors:
- Up to 8 WH31 multi-channel temperature and humidity sensors Or 8 WN30 multi-channel temp sensors
- Up to 8 WN34 Temperature Sensors

- Up to 4 WH41/WH43 PM2.5 air quality sensors
- One WH45 PM2.5/PM10/CO2/temperature and humidity all-in-1 sensor
- Up to 8 WH51 soil moisture sensors
- Up to 4 WH55 water leak sensors
- One WH57 lightning sensor
- Future sensors to be developed
- Pushes sensor data to cloud weather services:
- https://www.ecowitt.net
- https://www.wunderground.com
- https://www.weathercloud.com/
- https://www.wow.com
- Custom own server data hosting possible when server data exchange is compatible with either Wunderground or Ecowitt protocol.
- Manage sensor calibration setup.
- Manage sensor via sensor ID.
- Data storage service on Ecowitt server: https://ecowitt.net
- Data storing interval:
  - by day: 5 minutes
  - by week: 30 minutes
  - by month: 4 hours
  - by year: 1 day
- Stores data for past three months at 5-minute intervals
- Stores data for past one year at 30-minute intervals
- Stores data for past two year at 4-hour intervals

**Note:** The optional sensors can be purchased separately. If more info needed, please visit our website: http://www.ecowitt.com. Make sure to select the model of the units with the same RF frequency as your gateway (the frequency is different for various countries because of regulations).

**Note:** To pair the optional sensors with the HP2561 console, please follow the below operations:

- 1. Place the optional sensor next to the console(keep 5-10ft away from each other).
- 2. Install batteries on the sensor and wait for 1-2 minutes.
- 3. Check whether the console will pick up the sensor data automatically and display it on the screen.
- 4. If not, press the gear icon and go to Setup page find More and enter its Setup page find Sensors ID and enter its Setup page.
- 5. In the Sensors ID Setup page, find the sensor you want to pair select the ID number box and register it.
- 6. Once successfully, you may return to the main interface to check the data.
- 7. If you know exactly the sensor ID, and want console to pair that sensor only, you may enter the sensor ID, and save the change to make it effect.

# **3** Console Display

See Figure 18 to help you identify elements of the console's display screen.

Figure 5: Display Console Screen Layout

No	Description	No	Description

#### Table 1: Display console detailed items

**Note:** If you have purchased the optional WH55 water leak sensor, please check the following instructions for the display color:

- Green normal
- Red & Flash leaking
- Yellow low battery alert
- Orange offline over 10 minutes

If you have purchased the optional WH34 Temperature Sensor, please check and view it on Optional Sensor Display Mode. Because WH34 Temperature Sensor won't display on the main screen of the console.

# 3.1 History Mode

# 3.1.1 Initial Display Console Set Up

Immediately after power up (inserting power adapter), the unit will turn on the display, and the unit will start to look for reception of the indoor and outdoor sensor data. This may take up to 3 minutes.

**Dark Background Display** 

#### Light Background Display

**Note:** Sunrise/sunset time display will only work properly when GEO location has been set up correctly. GEO setup can be carried out under setup menu.

#### 3.1.2 Key functions

#### Figure 6: Buttons around the display

There is a set of eight keys on the bottom of the display console. The following tables briefly explains the function of these keys.

Description
Brightness control key
Press this key to decrease the brightness
Brightness control key
Press this key to enhance the brightness
Backlight on/off key
Press this key to on/off the backlight
Background key
Press this key to choose between dark background display and
light background display
Pressure display key
Press this key to choose the display between Absolute pressure
and Relative pressure.
Channel key
Press this key to Shift the display between indoor temp &
humidity, Multiple Channel temp& humidity and scroll
automatically mode
History key
Press this key once to view Max/Min record; Press twice to
enter History mode; Press three times to enter Graph Mode.
Setting key
Press this key to enter Setting Mode.

#### Table 2: Console buttons

# 3.1.3 Main interface icons explain

#### 3.1.3.1 Temperature Icon

Temperature Range (degF)	Color Ring	Temperature Range (degF)	Color Ring
< -10	$\bigcirc$	50-60	$\bigcirc$
-10 to 0	$\bigcirc$	60-70	$\bigcirc$
0 to 10	$\bigcirc$	70-80	$\bigcirc$
10-20	$\bigcirc$	80-90	$\bigcirc$
20-30	0	90-100	$\bigcirc$
30-40	$\bigcirc$	100-110	$\bigcirc$
40-50	$\bigcirc$	> 110	$\bigcirc$

Note: please refer to the online manual for colorful display.

### 3.1.3.2 Humidity Icon

Humidity Range(%)	Color Ring	Humidity Range(%)	Color Ring
0%, No signal or dashes	0	50 to 60	0
1 to 10	0	60 to 70	0
10 to 20	0	70 to 80	0
20 to 30	0	80 to 90	0
30 to 40	0	90 to 99	0
40 to 50	0	100%	0

Current wind direction indication  $\blacktriangleright$ , 10-minute average wind direction indication  $\checkmark$ .

Hourly Rain (in)	Icon	Hourly Rain (in)	Color Ring
0.0	$\bigcirc$	0.6 to 0.8	$\bigcirc$
0 to 0.2	$\bigcirc$	0.8 to 1	
0.2 to 0.4	$\bigcirc$	1 to 1.2	Ô
0.4 to 0.6	$\bigcirc$	1.2 to 1.4	

#### 3.1.3.3 Hourly Rainfall Icon

#### 3.2 Multiple Channel Selection and Scroll Mode

Multi-channel sensor is an optional sensor, not included in the package. If

you have multiple wireless sensors, while in normal mode, press the key to toggle display in sequence of indoor, ch1, ch2....ch8, scrolldisplay. Please note if only CH2 is received, it will skip CH1, and toggle only between indoor and already learned sensors.

While in Scroll display mode, the scroll icon will be displayed next to the indoor humidity, and will scroll every 5 seconds.

**Note:** For multi channel sensor, the history data will be saved to a SD card(not included).

# 3.2.1 View and Reset MAX/MIN

While in normal display, press the  $\swarrow$  key once to view and reset minimum and maximums.

Figure 12: Time and date Setup Screen

1) Time setting (hour/minute/second)

Press key to select time setting field, and the hour digit will turn red, press the or key to change the hour setting. Press to set the minute, the minute digit will turn red, press the or key to change the minute setting. Press to set the second, and the second digit will turn red, press the or key to change the second setting 2) Date setting

The time server is time.nist.gov. Press the or key to tick" Automatically synchronize with internet time server" and press" update" to synchronize with time server immediately. Console time will be updated at 2:01am automatically when internet access is possible.

### 3.3.2 Time Format setting

Press it to change the time format between hour: minute: second (h:mm:ss), hour: minute: second AM (h:mm:ss AM) and AM hour: minute: second (AM h:mm:ss).

# 3.3.3 Date Format setting

Press to change the time format between DD-MM YYYY, YYYY-MM- DD and MM-DD-YYYY

# 3.3.4 Temperature unit setting

Press to change the temperature units of measure between °F and °C.

#### 3.3.5 Barometric unit

Press to change the temperature units of measure between inHg, mmHg and hpa

### 3.3.6 Wind speed unit

Press to change the wind speed units of measure between mph, bft (Beaufort scale), ft/s, m/s, km/h and knot.

### 3.3.7 Rainfall unit

Press to change the rainfall units of measure between in and mm

### 3.3.8 Solar Rad. Unit

Press to change the solar radiation units of measure between  $W/m^2$ , lux and fc.

#### 3.3.9 Multi Channel Sensor

In Multi channel sensor Setup Screen, you can rename the sensor or register the sensor again while the sensor lost connection to console display.

	Setup			
	Name	Temperature	Humidity	Register
CH1	CH1	27.7 °C	56 %	Yes
CH2	CH2	27.7 °C	57 %	Yes
СНЗ	СНЗ	27.7 °C	62 %	Yes
CH4	CH4	27.6 °C	60 %	Yes
CH5	CH5	26.5 °C	64 %	Yes
CH6	CH6	27.0 °C	59 %	Yes
CH7	CH7	27.2 °C	60 %	Yes
CH8	CH8	26.0 °C	63 %	Yes
€	Q	$\uparrow$	$\downarrow$	ć

Figure 13: Multi channel sensor Setup Screen

Press or ress the or ress the select Name setting field, the name on focus turns green, press the or rest key to pop up the keyboard to enter the sensor name. Press ress to scroll to the character and press to select the character. Press to return to the setup page.

If the auto backlight turn-on time has been set, you can press key to turn off the backlight within the turn on time. Backlight will turn on again automatically at next turn on time. You can press any key to turn on the backlight for 60s within the turn off time

#### 3.3.11 Longitude: Latitude setting

While in Menu Setting Mode, press key to select Longitude: Latitude Setup field, press or key to enter Longitude Latitude Setup mode:

Figure 16: Longitude and Latitude Setting Screen

The sunrise/sunset times will be calculating automatically base on the Longitude and Latitude. Your location GEO info can be found on mobile compass page. Two digits after decimal should be enough for this feature to be working correctly.

### 3.3.12 Barometric display

Press to change the barometer display between REL (relative pressure) and ABS (absolute pressure)

### 3.3.13 Rainfall season (default: January)

Press it to change the beginning of the rainfall yearly season month. The default is January. Rainfall season influence the annual rainfall maximum, minimum and total value. When one month was selected, the annual rainfall and annual max/min rainfall were zero clearing at 0:00 of the first day of the selected month.

# 3.3.14 Storing Interval (1-240minutes Selectable)

#### 3.3.14.1 Weather Server

You may jump to section 5.10.16 now to have your console connected with your Wi-Fi network first. Then back to section 5.10.15 to have cloud data hosting setup completed.

Your console is capable of sending your sensor data to select internetbased weather services. The supported services are shown in the table below:

Service	Description
Weather Undergroud	Site: https://wunderground.com provides local & long-range weather forecasts, weather reports, maps & tropical weather conditions for locations worldwide.
WOW	Site: https://wow.metoffice.gov.uk A UK based weather observation website.
Weather Cloud	Site: https://weathercloud.net A large network of weather stations reporting data in real time from all over the world.
Ecowitt Weather	Site: https://www.ecowitt.net Ecowitt's new weather server that can host a bunch of sensors that other services don't support at this time.

Table 3: Supported weather services

**Note:** If you are testing the setup with the outdoor sensor package nearby and indoor, you may want to consider connecting to Wi-Fi, but not yet configuring any of the weather services. The reason is that while indoor the temperatures and humidity recorded by the outdoor sensor, and as reported to the weather service(s) will reflect indoor conditions, and not outdoor conditions. Therefore, they will be incorrect. Furthermore, the rainfall bucket may be tripped during handling, causing rain to register while it may not actually have been raining. One way to prevent this is to follow all instructions, except to use an incorrect password, on purpose! Then, after final outdoor installation, come back and change the password after clearing console history. That will start uploading to the services with a clean slate.

Press or key to enter Weather Server set up mode. The device can be configured to send real-time data to wunderground.com®. Enter the Station ID and Password obtained from Wunderground.com.

## 3.3.14.3 Viewing data on wunderground.com

The most basic way to observe your weather station's data is by using the wunderground.com web site. You will use a URL like this one, where your station ID replaces the text "STATIONID": http://www.wunderground.com/personal-weather-station/dashboard?ID=ST ATIONID

It will show a page such as this, where you can look at today's data and historical data as well:

There are also some very useful mobile apps. The URLs provided here go to the Web version of the application pages. You can also find them directly from the iOS or Google Play stores:

• WunderStation: iPad application for viewing your station's data and graphs

https://itunes.apple.com/us/app/wunderstation-weather-from-yourneigh borhood/id906099986

• WU Storm: iPad and iPhone application for viewing radar images, animated wind, cloud coverage and detailed forecast, and PWS station data

https://itunes.apple.com/us/app/wu-storm/id955957721

• Weather Underground: Forecast: iOS and Android application for forecasts

https://itunes.apple.com/us/app/weather-underground-forecast/id486154 808

https://play.google.com/store/apps/details?id=com.wunderground.an dro id.weather&hl=en

**PWS Weather Station Monitor**: View weather conditions in your nei ghborhood, or even right in your own backyard. Connects to wunderg round.com

https://itunes.apple.com/us/app/pws-weather-stationmonitor/id713705929

## 3.3.14.4 Registering with and using Ecowitt Weather

You can also use the Ecowitt Weather server to monitor and record all your sensors' data. Configure as follows:

- On the Weather Server page, set the reporting interval time(default: 1 minute).
- Visit the website: https://www.ecowitt.net on your computer and finish the registration on the page.
- Press the upper left menu button and select Devices.
- Press Add Device and input all the information needed(The MAC address can be found on the Weather Server page).
- Press Save.
- Press Dashboard on the menu. Your sensor data would be available on the dashboard within several minutes.

**Note:** When select device address on map, please wait until the map displays before selecting your address.

You may add a shortcut to the ecowitt.net website on the home page of your phone so that you can visit it just like opening an app.

#### 3.3.14.5 Viewing data on ecowitt.net

You can observe your sensor's data by using the ecowitt.net web site. You will use a URL like this one, where your station ID replaces the text "STATIONID".

```
https://www.ecowitt.net/home/index?id=STATIONID
```

**Note:** If you want to share your station data with other users, you may use the Share option under the Menu to create a share link.

It will show a page such as this, where you can look at today's data and historical data as well.

#### Dashboard

#### **Graph display**

## 3.3.14.6 Customized server setup

For highly experienced users, it offers the option to send data to the user's own server. Press the "setup" button to enter Customized setup screen

Figure 19 : Server setup screen

Select Enable button and select the protocol type. The website should has the same protocol with Wunderground or Ecowitt. Input all the information needed.

## 3.3.15 Connect Console to Your Router: Wi-Fi scan

Entering this mode, system will display all the available Wi-Fi networks. Select the SSID that you want console to be connected with (only supports 2.4GHz band Wi-Fi network ), and enter passer word as required.

					_	_		Connected				.11	
OST_Engine	ering							Not Connected				.atl	
ChinaNet-M	8C8								No	t Conr	nected	.11	
NEWcompa				-	_	_	_	_	Mo	t Conr	octod	וו. ך	
Goddess	Pass	word										.11

performed. Press button and restart Wi-Fi Scan, this will usually solve the problem.

Only after connect to WLAN you can upload the data to weather website. If the Wi-Fi network connects successfully, the icon will show on the left top of the console display. If the data upload to Wunderground.com

successfully, the icon will show on the left top of the console display. If the Wi-Fi network you would like to connect is with a hidden SSID, please follow below steps to connect:

After connected successfully, the status will display" Connected".

Hidden SSID

#### 3.3.16 Background

While in Menu Setting Mode, press key to select Background Setup field, press or key to choose between dark background display and light background display.

## 3.4 Alarm Setting Mode

Icon	Description
9	Select key
S.	Press this key to select the unit or scrolls the value
0	Select key
U	Press this key to select the unit or scrolls the value.
1	Left key
	Press this key to select the set value.
	Right key
	Press this key to select the set value.
$\mathbf{T}$	Up arrow key
	Press this key to change the activated option field
1	Down arrow key
$\checkmark$	Press this key to change the activated option field
ŝ	Set key
**	Press this key to select the Setting sub-Mode
<del>(</del> )	Return key
Ċ	Press this key to return to previous mode

The first row is high alarm value and the second row is low alarm value. When weather alarm condition has been triggered, that particular alarm will sound for 120 second and the corresponding icon will flash until the weather condition doesn't meet the user set level. Press any key to mute the alarm.

## 3.5 Calibration Mode

Calibratio	n			
Indoor Temperature	77.7 °F	1w/	m² = 126.7 lux	
Indoor Humidity	67 %	UV	Gain 1.00	
Outdoor Temperature	77.2 °F	Wind	Gain 1.00	
Outdoor Humidity	65 %	Rain	Gain 1.00	
ABS Barometer	29.78 inHg	Daily	Rain 0.00 in	
REL Barometer	29.78 inHg	Weekly	Rain 0.00 in	
Wind Direction	58	Monthly	Rain 0.00 in	
Solar Rad. Gain	1.00	Yearly	Rain 0.00 in	
€ Q ←	- →	$\uparrow \downarrow$	ر ش	

Icon	Description
9	Select key
C.	Press this key to select the unit or scrolls the value
	Select key
Ŭ	Press this key to select the unit or scrolls the value.
1	Left key
	Press this key to select the set value.
	Right key
	Press this key to select the set value.
$\wedge$	Up arrow key
	Press this key to change the activated option field
	Down arrow key
$\checkmark$	Press this key to change the activated option field
33	Set key
5	Press this key to select the Setting sub-Mode
4	Return key
	Press this key to return to previous mode

To adjust the parameter, press to scroll to the parameter you wish  $\rightarrow$ to highlight the sign (positive vs. negative, if to change. Press

applicable) and significant digit. Press or O

to change the calibrated value.

Parameter	Type of Calibration	Default	Typical Calibration Source
Temperature	Offset	Current Value	Red Spirit or Mercury Thermometer (1)
Humidity	Offset	Current Value	Sling Psychrometer (2)
ABS Barometer	Offset	Current Value	Calibrated laboratory grade barometer
REL Barometer	Offset	Current Value	Local airport (3)
Wind Direction	Offset	Current Value	GPS, Compass (4)
Solar Radiation	Gain	1.00	Calibrated laboratory grade solar radiation sensor
1 w/m <sup>2</sup>	Gain	126.7 lux	Solar radiation conversion from lux to $w/m^2$ for wavelength correction (5)
Wind	Gain	1.00	Calibrated laboratory grade wind meter (6)
Rain	Gain	1.00	Sight glass rain gauge with an aperture of at least 4" (7)
Daily Rain	Offset	Current Value	Apply an offset if the weather station was not operating for the entire day.
Weekly Rain	Offset	Current Value	Apply an offset if the weather station was not operating for the entire week.
Monthly Rain	Offset	Current Value	Apply an offset if the weather station was not operating for the entire month.
Yearly Rain	Offset	Current Value	Apply an offset if the weather station was not operating for the entire year.

(1) Temperature errors can occur when a sensor is placed too close to a heat source (such as a building structure, the ground or trees).

To calibrate temperature, we recommend a mercury or red spirit (fluid) thermometer. Bi-metal (dial) and digital thermometers (from other weather stations) are not a good source and have their own margin of error. Using a local weather station in your area is also a poor source due to changes in location, timing (airport weather stations are only updated once per hour) and possible calibration errors (many official weather stations are not properly installed and calibrated).

Place the sensor in a shaded, controlled environment next to the fluid thermometer, and allow the sensor to stabilize for 3 hours. Compare this temperature to the fluid thermometer and adjust the console to match the fluid thermometer.

(2) Humidity is a difficult parameter to measure electronically and drifts over time due to contamination. In addition, location has an adverse affect on humidity readings (installation over dirt vs. lawn for example).

Official stations recalibrate or replace humidity sensors on a yearly basis. Due to manufacturing tolerances, the humidity is accurate to  $\pm$  5%. To improve this accuracy, the indoor and outdoor humidity can be calibrated using an accurate source, such as a sling psychrometer.

(3) The display console displays two different pressures: absolute (measured) and relative (corrected to sea-level).

To compare pressure conditions from one location to another, meteorologists correct pressure to sea-level conditions. Because the air pressure decreases as you rise in altitude, the sea-level corrected pressure (the pressure your location would be at if located at sealevel) is generally higher than your measured pressure.

Thus, your absolute pressure may read 28.62 inHg (969 mb) at an altitude of 1000 feet (305 m), but the relative pressure is 30.00 inHg (1016 mb)

The standard sea-level pressure is 29.92 in Hg (1013 mb). This is the average sea-level pressure around the world. Relative pressure measurements greater than 29.92 in Hg (1013 mb) are considered high pressure and relative pressure measurements less than 29.92

inHg are considered low pressure.

To determine the relative pressure for your location, locate an official reporting station near you (the internet is the best source for real time barometer conditions, such as Weather.com or Wunderground.com), and set your weather station to match the official reporting station.

- (4) Only use this if you improperly installed the weather station sensor array, and did not point the direction reference to true north.
- (5) The default conversion factor based on the wavelength for bright sunlight is 126.7 lux /  $w/m^2$ . This variable can be adjusted by photovoltaic experts based on the light wavelength of interest, but for most weather station owners, is accurate for typical applications, such as calculating evapotransporation and solar panel efficiency.
- (6) Wind speed is the most sensitive to installation constraints. The rule of thumb for properly installing a wind speed sensor is 4 x the distance of the tallest obstruction. For example, if your house is 20' tall and you mount the sensor on a 5' pole:

Distance =  $4 \times (20 - 5)' = 60'$  or =  $4 \times (6.10 - 1.52) = 18.32$ m.

Many installations are not perfect and installing the weather station on a roof can be difficult. Thus, you can calibrate for this error with a wind speed multiplier.

In addition to the installation challenges, wind cup bearings (moving parts) wear over time.

Without a calibrated source, wind speed can be difficult to measure. We recommend using a calibrated wind meter (not included) and a constant speed, high speed fan.

**Note:** If located in southern hemisphere, please follow the steps to calibrate the wind direction:

1. Install the outdoor sensor package with the West arrow on the sensor pointing due East.

2. Check the wind direction offset (Default: equals to the current wind

direction)

If: Current wind direction offset < 180, then it should be calibrated to be: current wind direction + 180

If: Current wind direction offset > 180, then it should be calibrated to be: current wind direction - 180

For example, if the current wind direction is 288, then you'll need to set the wind direction offset to be: 288-180=108.

If the current wind direction is 12, then you'll need to set the wind direction offset to be: 12+180=192.

(7) The rain collector is calibrated at the factory based on the funnel diameter. The bucket tips every 0.01" or 0.1m of rain (referred to as resolution). The accumulated rainfall can be compared to a sight glass rain gauge with an aperture of at least 4" or 0.1m.

Make sure you periodically clean the rain gauge funnel.

**Note:** The purpose of calibration is to fine tune or correct for any sensor error associated with the devices margin of error. Errors can occur due to electronic variation (example, the temperature sensor is a resistive thermal device or RTD, the humidity sensor is a capacitance device), mechanical variation, or degradation (wearing of moving parts, contamination of sensors).

Calibration is only useful if you have a known calibrated source you can compare it against, and is optional. This section discusses practices, procedures and sources for sensor calibration to reduce manufacturing and degradation errors. Do not compare your readings obtained from sources such as the internet, radio, television or newspapers. The purpose of your weather station is to measure conditions of your surroundings, which vary significantly from location to location.

**Note:** UV Calibration <u>MUST</u> be performed every 2 to 3 months to improve results. Over time, UV Index may alter results based on bright and strong sunlight conditions. This is why diligent UV Calibration is recommended.

## 3.6 More

On the More page, you can set the Calibration for the optional multichannel soil moisture/PM2.5/temp and humidity sensor. You can also view or manage all the sensors ID on the Sensors ID Setup page.

#### Note:

To calibrate the optional soil moisture sensor, please refer to the manual of the WH51 soil moisture senor.

To calibrate the PM2.5 sensor, you'll need to find a reliable source, such as professional devices from your local air quality service.

To calibrate the temp and humidity sensor, please refer to section 4.9.19

#### **Sensor ID Setup**

On this page you can set the following:

- View sensor ID, signal strength and battery power condition. 1-4 bars means 1-4 successful successive signal receptions without missed ones.
- Register the sensor when a new sensor is to be paired with.
- Stop unwanted sensor( like from your neighbor) to be received by disable that sensor type.

• Make console receiving data from a pre-defined sensor ID.

Sensor	Signal	ID		СН	Sens	or	Signal	ID		СН	Sensor	Signal	ID

#### 3.7 Factory reset

Factory					
Re-register Transmitter	Indoor		Clear History	/	Clear
Re-register Transmitter	Outdoor		Clear Ma×/Mir	<b>۱</b>	Clear
Automatic Clear Max/Min	OFF		Backup data	1	Backup
Reset to Factory	Reset		Abou	t	Display
Q Q		$\uparrow$	$\downarrow$	ĝ	Ċ

## 3.7.1 Re-register indoor transmitter

Q key to confirm the selection.

## 3.7.2 Re-register outdoor transmitter

Please reference section 5.13.1. Procedures and settings are similar to reregister indoor transmitter.

## 3.7.3 Automatic Clear Max/Min

To turn on/off automatically clear Max/Min record at 0:00hr every day.

Press  $\uparrow$  or  $\checkmark$  key to select Automatic clear Max/Min. Press

r 🔛 key to switch on/off.

When it is selected with ON option, min/max will be presented as daily min/max, and with OFF option selected, it is for history min/max record.

## 3.7.4 Reset to Factory

## 3.7.5 Clear History

## 3.7.6 Clear Max/Min

### 3.7.7 Backup data

**Note:** You need to insert a SD card(not included) into the console before using this function.

#### 3.7.8 About information

About	
Model: HP2500	
Total storage: 16MB	
Available storage: 10.925MB	
Hardware revision number: 1.0	
Firmware revision number: 1.0.0	
Frequency: 915M	
Indoor ID: 0×db	
Outdoor ID: 0×67	
Wifi Firmware: EasyWeatherV1.2.0	
MAC: B4:E6:2D:07:25:71	
IP:	
	¢

**Note:** This figure is just for reference(model and frequency will change according to different market). The actual display console may be with higher firmware version than this manual described because we will update the firmware occasionally.

## **4 Other Console Functions**

## 4.1 Beaufort Wind Force Scale

If you have selected the use of Beaufort wind speed units, you can use the table below for reference. The Beaufort scale is based on qualitative wind conditions and how they would affect a ship's (frigate) sails (so yes, it is an "old" standard). It is therefore less precise than the other scales but is still in use in various locales.

Wind speed	Beaufort	Description
	number	
0 - 1 mph, or 0 - 1.6 km/h	0	Calm
1 - 3 mph, or 1.6 - 4.8 km/h	1	Light air
3 - 7 mph, or 4.8 - 11.3 km/h	2	Light breeze
7 - 12 mph, or 11.3 -1 9.3 km/h	3	Gentile breeze
12 - 18 mph, or 19.3 - 29.0 km/h	4	Moderate breeze
18 - 24 mph, or 29.0 - 38.6 km/h	5	Fresh breeze
24 - 31 mph, or 38.6 - 49.9 km/h	6	String breeze
31 - 38 mph, or 49.9 - 61.2 km/h	7	Near gale
38 - 46 mph, or 61.2 - 74.1 km/h	8	Gale
46 - 54 mph, or 74.1 - 86.9 km/h	9	Strong gale
55 - 63 mph, or 88.5 - 101.4 km/h	1	Storm
	0	<b>X7' 1</b>
64 - /3 mph, or 103 - 11/.5 km/h	1	Violent storm
74 mph and above, or 119.1 km/h	1	Hurricane
and above	2	

#### Table 4: Beaufort wind force scale

### 4.2 Weather Forecasting

The seven weather icons are Sunny, Partly Cloudy, Cloudy, Rainy, Stormy, Snowy and Storm Snowy.

The forecast icon is based on the rate of change of barometric pressure. Please allow at least one month for the weather station to learn the barometric pressure over time.

Sunny	Partly Cloudy	Cloudy
Pressure increases for a	Pressure increases slightly	Pressure decreases
sustained period of time	or initial power up	slightly
Rainy	Stormy	Snowy
		***
Pressure decreases for	Pressure rapidly	Pressure decreases for
a sustained period of	decreases	time, and temperature
time		≪0°C
Storm Snowy		
Pressure rapidly decreases, and temperature≤0°C		

#### 4.3 Lightning Alert

The lightning icon vill appear if the Dew Point exceeds 70 F. This means there is a chance of lightning storms forming.

#### 4.4 Weather Forecasting Description and Limitations

In general, if the rate of change of pressure increases, the weather is generally improving (sunny to partly cloudy). If the rate of change of pressure decreases, the weather is generally degrading (cloudy, rainy or stormy). If the rate of change is relatively steady, it will read partly cloudy.

The reason the current conditions do not match the forecast icon is because the forecast is a prediction 24-48 hours in advance. In most locations, this prediction is only 70% accurate and it is a good idea to consult the National Weather Service for more accurate weather forecasts. In some locations, this prediction may be less or more accurate. However, it is still an interesting educational tool for learning why the weather changes.

The National Weather Service (and other weather services such as Accuweather and The Weather Channel) have many tools at their disposal to predict weather conditions, including weather radar, weather models, and detailed mapping of ground conditions.

#### 4.5 Moon Phase

In the event the moon phase is 100%, the icon

Full Moon

will

appear in its place. In the event of 0%, the word "New Moon" will appear in its place.

Moon Phase	Image	Moon Phase	Image
Day 1	(	Day 14	
Day 2	(	Day 15	0
Day 3	(	Day 16	2
Day 4	(	Day 17	0
Day 5	(	Day 18	
Day 6	(	Day 19	
Day 7		Day 20	
Day 8	•	Day 21	)
Day 9	0	Day 22	)
Day 10	0	Day 23	)
Day 11	0	Day 24	)

Day 12	0	Day 25	)
Day 13 Full Moon	0.0	Day 26 New Moon	

## 5 Troubleshooting Guide

Look through the following table and locate an issue or problem you are experiencing in the left column and read possible solutions in the right column.

Problem	Solution
Wireless remote (thermo-hygrometer) not reporting in to console.	The maximum line of sight communication range is about 300'. Move the sensor assembly closer to the display console.
	Resynchronize the remote sensor(s). Reference Section 5.13.2
There are dashes on the display console.	Install a fresh set of batteries in the remote sensor(s).
	Make sure the remote sensors are not transmitting through solid metal (acts as an RF shield), or earth barrier (down a hill).
	Radio Frequency (RF) Sensors cannot transmit through metal barriers (example, aluminum siding) or multiple, thick walls.
	Move the display console around electrical noise generating devices, such as computers, TVs and other wireless transmitters or receivers.
Outdoor sensor array does not communicate to the display console.	The sensor array may have initiated properly and the data is registered by the console as invalid, and the console must be reset. Press the reset button as described in Section Installation.

	With an open ended paperclip, press the reset button for 3 seconds to completely discharge the voltage.
	Take out the batteries and wait one minute, while covering the solar panel to drain the voltage.
	Put batteries back in and re-sync with console by powering down and up the console with the sensor array about 10 feet away.
	Bring the sensor array inside the house (you can disconnect it from the rest of the sensors). The LED next to the battery compartment will flash every 16 seconds. If the LED is not flashing every 16 seconds
	Replace the batteries in the outside sensor array.
	If the batteries were recently replaced, check the polarity. If the sensor is flashing every 16 seconds, proceed to the next step.
	There may be a temporary loss of communication due to reception loss related to interference or other location factors, or the batteries may have been changed in the sensor array and the console has not been reset. The solution may be as simple as <b>powering down</b> <b>and up the console</b> .
	Replace the batteries in the outside sensor array.
	With the sensor array and console 10 feet away from each other, remove AC power from the display console and wait 10 seconds. Re-connect power.
Temperature sensor reads too high in the day time.	Make certain that the sensor array is not too close to heat generating sources or strictures, such as buildings, pavement, walls or air conditioning units.
	Use the calibration feature to offset installation

	issues related to radiant heat sources. Reference 5.12.	
Absolute pressure does not agree with official reporting station	You may be viewing the relative pressure, not the absolute pressure.	
	Select the absolute pressure. Make sure you properly calibrate the sensor to an official local weather station. Reference Section 5.12 for details.	
Rain gauge reports rain when it is not raining	An unstable mounting solution (sway in the mounting pole) may result in the tipping bucket incorrectly incrementing rainfall. Make sure you have a stable, level mounting solution.	
Data not reporting to Wunderground.com	<ol> <li>Confirm your password is correct. It is the password you registered on Wunderground.com. Your Wunderground.com password cannot begin with a non- alphanumeric character (a limitation of Wundeground.com, not the station). Example, \$oewkrf is not a valid password, but oewkrf\$ is valid.</li> </ol>	
	2. Confirm your station ID is correct. The station ID is all caps, and the most common issue is substituting an O for a 0 (or visa versa). Example, KAZPHOEN11, not KAZPHOEN11	
	3. If there's a number "1" on the station key, try to i nput the lower case of letter "L" to replace it.	
	4. Make sure the date and time is correct on the console. If incorrect, you may be reporting old data, not real time data.	
	5. Make sure your time zone is set properly. If incorrect, you may be reporting old data, not real time data.	
	6. Check your router firewall settings. The console sends data via Port 80.	
No WiFi connection	1. Check for WiFi signal strength symbol on	
	the display <b>mill</b> . If wireless connectivity is successful and reporting to Wunderground.com, the WiFi icon <b>will</b> be displayed the home page.	
----------------------------------	-----------------------------------------------------------------------------------------------------------------------------------------------------------	--
	2. Make sure your modem WiFi settings are correct (network name, password and security settings).	
Indoor temperature is inaccurate	1. temperature sensor probe unfolded to avoid temperaure inaccuracy issue.	

## **6** Specifications

Note: Out of range values will be displayed using "---":

Indoor sensor	Specification
Temperature range	-10°C – 60°C (14°F - 140°F)
Temperature resolution	0.1°C, or 0.1°F
Humidity range	10% ~ 99%
Humidity resolution	1%
Barometric pressure range	300 – 1,100 hPa (8.85 – 32.5 inHg)
Barometric pressure accuracy	$\pm$ 3 hPa in 700 – 1,100 hPa range
Barometric pressure resolution	0.1 hPa (0.01 inHg)
Sensor reporting interval	60 seconds
Alarm Duration	120 seconds

#### Table 5: Indoor sensor specification

Power	Specification
Base station/console	5V DC Adapter (included)
Indoor sensor	2 x AA 1.5 Alkaline batteries (not included)
Outdoor sensor	Solar panel (built-in)
Outdoor sensor (backup)	2 x AA 1.5V LR6 Alkaline (not included), or 2 x AA 1.5V Lithium battery (not included)

#### **Table 6: Power specification**

The primary power source for the outdoor sensor is the solar panel. When available solar power (light over recent period) is insufficient, the batteries will be used. In outdoor climates that frequently have sustained temperatures below 0°C (or 32°F) the use of Lithium batteries is strongly suggested as these are performing better than Alkaline batteries under such circumstances.

## 7 Warranty Information

# We disclaim any responsibility for any technical error or printing error, or the consequences thereof.

### All trademarks and patents are recognized.

We provide a 1-year limited warranty on this product against manufacturing defects, or defects in materials and workmanship.

This limited warranty begins on the original date of purchase, is valid only on products purchased, and only to the original purchaser of this product. To receive warranty service, the purchaser must contact us for problem determination and service procedures.

This limited warranty covers only actual defects within the product itself and does not cover the cost of installation or removal from a fixed installation, normal set-up or adjustments, or claims based on misrepresentation by the seller, or performance variations resulting from installation-related circumstances.
